F Gateway Determination 18/02/24	15

1. Introduction

In response to the Gateway Determination dated 18th January 2024 (see **Appendix F**), Tim Fitzroy & Associates (TFA) have been engaged to include the assessment of the detached dual occupancy dwelling to the *Preliminary Site Investigation* prepared by this office dated 15 July 2022.

This report provides the results of the *Preliminary Site Investigation* with respect to an revised Planning Proposal to Byron Shire Council (BSC) to amend the Byron Local Environmental Plan (BLEP) 2014 to formalise the use of the dwelling and the detached dual occupancy dwelling located at Lot 5 DP585928, No 55 Settlement Road Main Arm.

This report should be read in conjunction with TFA's General limitations to environmental information in Section 1.5.

1.1 Background

The planning proposal comprises:

- An application to BSC to amend the Byron Local Environmental Plan (BLEP) 2014 to formalise the use of the existing dwelling and detached dual occupancy dwelling located at Lot 5 DP585928, No 55 Settlement Road, Main Arm.

1.2 Objectives

This report has been prepared to accompany a Planning Proposal to BSC to specifically address potential contamination issues from past and current uses on No 55 Settlement Road, Main Arm (Lot 5 DP585928).

Chapter 4 Remediation of Land (SEPP Resilience and Hazards 2021) relates to contaminated land issues. Clause 4.6 of SEPP Resilience and Hazards 2021 sets out the obligations a planning authority must consider when granting a development application. Clause 4.6 relevantly provides:

4.6 Contamination and remediation to be considered in determining development application

- (1) A consent authority must not consent to the carrying out of any development on land unless—
 - (a) it has considered whether the land is contaminated, and
 - (b) if the land is contaminated, it is satisfied that the land is suitable in its contaminated state (or will be suitable, after remediation) for the purpose for which the development is proposed to be carried out, and
 - (c) if the land requires remediation to be made suitable for the purpose for which the development is proposed to be carried out, it is satisfied that the land will be remediated before the land is used for that purpose.
- (2) Before determining an application for consent to carry out development that would involve a change of use on any of the land specified in subsection (4), the consent authority must consider a report specifying the findings of a preliminary investigation of the land concerned carried out in accordance with the contaminated land planning guidelines.

(3) The applicant for development consent must carry out the investigation required by subsection (2) and must provide a report on it to the consent authority. The consent authority may require the applicant to carry out, and provide a report on, a detailed investigation (as referred to in the contaminated land planning guidelines) if it considers that the findings of the preliminary investigation warrant such an investigation.

(4) The land concerned is—

(a) land that is within an investigation area,

(b) land on which development for a purpose referred to in Table 1 to the contaminated land planning guidelines is being, or is known to have been, carried out,

(c) to the extent to which it is proposed to carry out development on it for residential, educational, recreational or child care purposes, or for the purposes of a hospital—
land—

(i) in relation to which there is no knowledge (or incomplete knowledge) as to whether development for a purpose referred to in Table 1 to the contaminated land planning guidelines has been carried out, and

(ii) on which it would have been lawful to carry out such development during any period in respect of which there is no knowledge (or incomplete knowledge).

As the land has been used for agricultural activities (banana plantation and passionfruit production) therefore clause 4.6 applies. This report has been prepared to satisfy Council that the site is suitable for the use proposed in the planning proposal. This report should be read in conjunction with TFA's General limitations to environmental information in Section 1.5.

1.3 Summary

The subject site covers an area of about 23.85ha approximately 1.8km south of the Main Arm village. The site is accessed via Settlement Road. Site improvements include a three bedroom dwelling, a 1 bedroom dual occupancy dwelling, a dam and fencing.

The site is an irregular shape and is located on the southern side of Settlement Road. The site is undulating ranging from 130m AHD in the south to 40m AHD in the north interspersed with a series of gullies. The vast bulk of site (estimated at over 80%) is covered with vegetation. A portion of the central and north western portion of the site has been partially cleared whereupon the dwelling, shed and dam are located.

A search of the NSW Department of Primary Industry (DPI) Cattle Dip Site Locator tool (<https://www.dpi.nsw.gov.au/animals-and-livestock/beef-cattle/health-and-disease/parasitic-andprotozoal-diseases/ticks/cattle-dip-site-locator>) indicated that the former Durrumbil cattle dip site has been decommissioned and is located on the northern side of Settlement Road, approximately 173m north west of the existing dwelling on the subject site and therefore within the 200m radius NSW EPA investigation zone.

This investigation is Tier 1 - preliminary site investigation, which is required to determine if contamination of the site's soil has occurred from past land usage in accordance with NEPM 1999 (2013), DUAP and EPA (1998). The investigation includes obtaining a history of land usage on the site which confirmed the previous use of the site for banana and passionfruit production and proximity of the former Durrumbil cattle dipsite and therefore a preliminary soil-sampling regime was undertaken. The results of the soil analysis are compared with the Health Investigation Levels (HILA) and Ecological Investigation Levels (EILs) outlined in NEPM 1999 (2013).

A total of sixteen boreholes (TFA1-TFA16 plus 2 QA samples) within proximity of the existing dwelling and detached dual occupancy dwelling were analysed for 16 metals (silver, arsenic, lead, cadmium, chromium, copper, manganese, nickel, selenium, zinc, mercury, iron, aluminium, beryllium, boron and cobalt), organochlorine pesticides (OCPs) and organophosphorus pesticides (OP's).

All of the soil samples show contaminant levels well below the most stringent Australian and New Zealand Environment and Conservation Council (ANZECC), National Environment Protection Measure (NEPM 2013) HILA Residential with garden/accessible soil and Ecological Soil Investigation Levels (NEPM 2013).

Based on the outcomes of this PSI there is no impediment to approval of the Planning Proposal to amend the Byron Local Environmental Plan (BLEP) 2014 to formalise the use of the existing dwelling and detached dual occupancy dwelling located at Lot 5 DP585928, No 55 Settlement Road, Main Arm.

1.4 Scope of Works

The objective of this preliminary investigation has been to determine if land contamination has occurred from historical and current land use activities occurring on site or immediately nearby. To determine if the site poses a significant risk of harm to end users (and nearby sensitive receptors), available historical information has been reviewed and a number of soil and groundwater samples have been collected and analysed for a range of contaminants typically associated with the land uses identified as having occurred on site including metals, hydrocarbons, asbestos and BTEXN.

The results of the soil analysis are compared to relevant National Environmental Protection Measure (NEPM 1999 updated 2013) guidelines in order to assess the significance of risk. This investigation is considered to be Stage 1 of the Managing Land Contamination Planning Guidelines (DUAP and EPA, 1998) or a Preliminary Site Investigation (PSI; NEPM 1999). If contamination levels exceed the adopted EPA acceptable levels, a detailed investigation is then required (i.e., a Stage 2 investigation or Detailed Site Investigation (DSI). If the contamination levels are below the relevant acceptable levels, and information gathered as part of the investigation also supports that contamination was unlikely to have occurred; only a Stage 1 (or PSI) investigation would be required.

This preliminary investigation has been used to identify the following:

- Past and present potentially contaminating activities occurring on or near the site; and
- The presence of Potential Contaminants of Concern associated with the identified land uses.

The investigation will also:

- Discuss the site condition;
- Provide a preliminary assessment of the site's contamination status; and
- Assess the need for further investigations.

Relevant documents considered in the preparation of this investigation included:

- ANZECC and NHMRC (1992) Australian and New Zealand Guidelines for the Assessment and Management of Contaminated Sites;

- Council of Standards Australia (2005) AS 4482.1-2005 Guide to the sampling and investigation of potentially contaminated soil – Non-volatile and semi-volatile compounds;
- NSW DEC (2006) Contaminated Sites – Guidelines for the NSW Site Auditor Scheme 2nd Edition;
- NSW EPA (1995) Contaminated Sites – Sampling Design Guidelines;
- NSW EPA (2011) Guidelines for Consultants Reporting Contaminated Sites; and
- National Environment Protection Council (NEPC) (2013) National Environment Protection (Assessment of Site Contamination) Measure

This preliminary assessment report is written in accordance with the new Contaminated land guidelines (NSW Environment Protection Authority 2020) and the Northern Rivers Regional Councils (NRRRC) Regional Policy for the Management of Contaminated Land (NRRRC 2006).

1.5 General limitations to environmental information

TFA has conducted the services in a manner consistent with the appropriate levels of care and rigour expected of members of the environmental assessment profession. No warranties or guarantees, expressed or implied, are made.

The findings of this report are strictly limited to identifying the environmental conditions associated with the subject property in regard to site contamination, and does not seek to provide an opinion regarding other aspects of the environment not related to site contamination, or to the suitability of the site in regard to: landuse planning and legal use of the land; and/or regulatory responsibilities or obligations (for which a legal opinion should be sought); and/or the occupational health and safety legislation; and/or the suitability of any engineering design. Reviews of such information are only in relation to the contaminated land aspects of any project or site. If specialist technical review of such documents is required, these should be obtained by an appropriate specialist.

The reporting and conclusions are based on the information obtained at the time of the assessments. Changes to the subsurface conditions may occur subsequent to the investigation described, through natural processes or through the intentional or accidental addition of contaminants, and these conditions may change with space and time.

Furthermore, the test methods used to characterise the contamination at each sampling location are subject to limitations and provide only an approximation of the contaminant concentrations. Monitoring and chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

The absence of any identified hazardous or toxic materials at the site should not be interpreted as a warranty or guarantee that such materials do not exist at the site. Therefore, future work at the site which involves subsurface excavation or removal of structures or parts thereof, should be conducted based on appropriate management plans. These should include, inter alia, environmental management plans, including unexpected findings protocols, hazardous building materials management plans, and occupational health and safety plans.

2. Site identification and Surrounds

2.1 Site Description

The subject site covers an area of about 23.85ha approximately 1.8km south of the Main Arm village. The site is accessed via Settlement Road. Site improvements include a three bedroom dwelling, a one bedroom detached dual occupancy dwelling a shed, a dam and fencing.

The site is an irregular shape and is located on the southern side of Settlement Road. The site is undulating ranging from 130m AHD in the south to 40m AHD in the north interspersed with a series of gullies. The vast bulk of site (estimated at over 80%) is covered with vegetation. A portion of the central and north western portion of the site has been partially cleared whereupon the dwelling, shed and dam are located.

A site locality diagram that shows the subject site is provided in **Figure 1**.

2.2 Zoning

Under the Byron Local Environmental Plan (BLEP 2014) (see **Appendix A**)The subject site is zoned:

- RU2 Rural Landscape;
- E2 Environmental Conservation; and
- DM Deferred Matter.

2.3 Surrounding Landuse

North	Rural residence and vegetation
South	Vegetation
West	Rural residence and vegetation
East	Banana Plantation and rural property

2.4 Surrounding Environment

The Brunswick River is situated about 450m to the east of the site. Three gullies drain from the subject site to the Brunswick River which is located to the east of Main Arm Road. The Brunswick River releases to the Coral Sea, South Pacific Ocean approximately 17km to the east of the site.

The marine river environment of the Brunswick River is considered to be a sensitive ecological receptor. The terrestrial and aquatic ecosystems and associated dependent species would be potential environmental receptors. Sensitive receptors also include humans, where primary contact (e.g., swimming) and secondary contact (e.g., boating) recreational uses would be potential human receptors of the river.

2.5 Current Use

The subject site is currently used for residential use and cattle agistment in the north western portion. The remainder of the site is a mix of native and exotic vegetation.

3. Environmental Setting

3.1 Local Meteorology

A summary of the climatic data from the Ballina Airport AWS (located approximately 47.5 km from the site) is shown in Table 3.1.

Table 3.1 Climate Summary Ballina Airport Weather Station

	Temperature °C		Rainfall mm	Mean number of raindays
	Minimum	Maximum	Average monthly	
January	21.3	28.0	153.4	14.6
February	21.1	27.6	156.1	14.9
March	20.2	26.6	150.9	16.9
April	17.6	24.0	168.5	15.1
May	15.1	21.5	89.5	13.2
June	13.2	19.4	174.9	14.3
July	12.3	18.9	80.9	11.4
August	13.1	20.1	72.4	7.8
September	15.3	22.1	52.0	9.3
October	16.9	23.6	91.4	12.6
November	18.6	25.3	87.6	11.2
December	19.9	26.6	123.0	13.5

3.2 Topography and Hydrology

The site is undulating ranging from 130m AHD in the south to 40m AHD in the north interspersed with a series of gullies. The site drains in a north and north easterly direction via a series of gullies to the Brunswick River.

3.3 Geology and Soils

3.3.1 Geology

Based on the NSW Department of Planning & Environment Soil Landscapes of Central and Eastern NSW mapping (accessed October 2021), the local geological conditions comprise 3 different geological units:

- Southern section:
 - are described as Lismore Basalt
- Middle section
 - are described as Neranleigh-Fernvale beds
- Northern section
 - are described as Undifferentiated alluvial deposits; sand, silt, clay and gravel; some residual and colluvial deposits

3.3.2 Soils

According to Soil Landscapes of Central and Eastern NSW Morand (1992) the local soils are described as shallow (<50 cm), poorly drained Lithosols and localised shallow

(50–100 cm), poorly drained Yellow Podzolic Soils (Gn2.34, Dy3.21) on quartzites and phyllites.

Moderately deep (100–150 cm), moderately well-drained Red Podzolic Soils (Dr2.31, Dr3.21, Gn3.74) with Yellow Podzolic Soils (Dy2.51, Dy3.21) on fine-grained sediments. Deep (>150 cm), moderately well-drained Red Earths (Uf4, Uf6) and Red Podzolic Soils (Dr2.21) on lower slopes.

3.4 Acid Sulfate Soils

Based on the Atlas of Australian Acid Sulfate Soils, the site is mapped as an area of *Class B Low Probability of occurrence: 6-70% chance of occurrence.*

3.5 Hydrogeology

There are no registered groundwater bores on the subject site. A search of NSW Department of Primary Industries Office of Water licensed bores within a 2km radius of the site identified 49 registered bores. The results of the groundwater bore search are summarised in **Table 3.2** and below and included in full in **Appendix A**.

Table 3.2 Registered Groundwater Drillers Logs in the Locale

4. Site History

4.1 Historical Aerial Photography Review

A search of historical aerial photographs was conducted of the subject site in an attempt to identify past uses on or about the future building envelopes. Aerial photographs were reviewed for the following years: 1942, 1958, 1966, 1971, 1979, 1987, 1997, 2006, 2010, 2014 and 2020 see **Appendix A**). Information garnered from the historical photographs is summarised in **Table 4.1** below:

Table 4.1 Review of Historical Aerial Photographs

Photograph	Site Observations
1942	<p>The 1942 photograph shows the site predominately cleared with what appears to be banana cultivation in the southern and eastern portion of the site with the exception of the steeper slopes to the south. The northern portion of the site is cleared and there appears to be a structure (possibly a dwelling) in the northern east of the site.</p> <p>The adjoining land to the east and west on north facing slopes appears to be under banana cultivation</p>
1958	<p>In the 1958 photograph it appears that the bulk of land has reverted to grazing. It is difficult to identify any horticultural activity.</p> <p>The structure identified as a potential dwelling in the 1958 photograph is no longer visible.</p> <p>The Durrumbil cattle dip site can be identified about 40m north of the north west boundary of the subject site.</p>
1966	<p>Apart from regrowth of native vegetation there is no significant changes</p>
1971	<p>Recommencement of what appears to be banana cultivation on the eastern side of the site in conjunction with banana cultivation on the adjoining property to the east. The north east portion of Lot 4</p>

Photograph	Site Observations
	DP 585928 No 34 Settlement Road has been cleared for quarrying
1979	The 1979 photograph shows cleared area on the western side of the site (possibly bananas or passionfruit (as advised by current owner Glenn Wright). Bananas continue to be cropped on the eastern portion of the site in conjunction with banana cultivation on the adjoining property to the east. The quarry remains on No 34 Settlement Road
1987	By 1987 banana cultivation had desisted in the eastern portion. The western portion remained is under cultivation (possibly passionfruit and bananas) The quarry remains on No 34 Settlement Road
1997	In 1997 the aerial photography shows banana cultivation recommenced in the eastern portion and some cropping remains in the eastern portion. A shed is now located in the south eastern portion and evidence of a small structure (current dwelling) in the mid-eastern portion. The Durrumbil cattle dip site is no longer visible. The quarry remains on No 34 Settlement Road
2006	In 2006 banana cultivation has ceased in the eastern portion but has continued in the adjoining property to the east. The dwelling in mid-east section has expanded. Passionfruit appears to have been retained along the mid-western boundary, however there is no evidence of banana production onsite. Regrowth continues over formerly cultivated land. The quarry remains on No 34 Settlement Road
2010	By 2010 the photograph does not show any evidence of cropping onsite. There is a new driveway (turning circle) to the west of the dwelling. Regrowth of native vegetation continues to occur. The quarry remains on No 34 Settlement Road

Photograph	Site Observations
2014	In 2014 there are no significant changes to the subject site.
2020	In 2020 there are no significant changes to the subject site. The quarry is no longer visible on No 34 Settlement Road

4.2 Australian and NSW Heritage Register

On 15 September 2021 a search of the:

- Australian Heritage Trust database did not reveal any heritage listed items on within close proximity of the subject site
- Commonwealth Heritage List did not reveal any heritage listed items on within close proximity of the subject site
- NSW State Heritage Items did not reveal any heritage listed items on within close proximity of the subject site
- Byron Local Environmental Plan Heritage Items did not reveal any heritage listed items on within close proximity of the subject site

State and Local Authority Records

4.3 Contaminated Land Record Search

4.3.1 Contaminated Land Record

A search of the Contaminated Land Record (EPA 2010b) for the Byron Shire Council Local Government Area (LGA) did not identify any notices on or near the site (see **Appendix A**).

4.3.2 Protection of the Environmental Operations Act Licenses

A search of the current list (EPA 2010c) of licensed activities as per Schedule 1 of the Protection of the Environment Operations Act 1997 did not identify any licensed activities on, or within close proximity of the subject site.

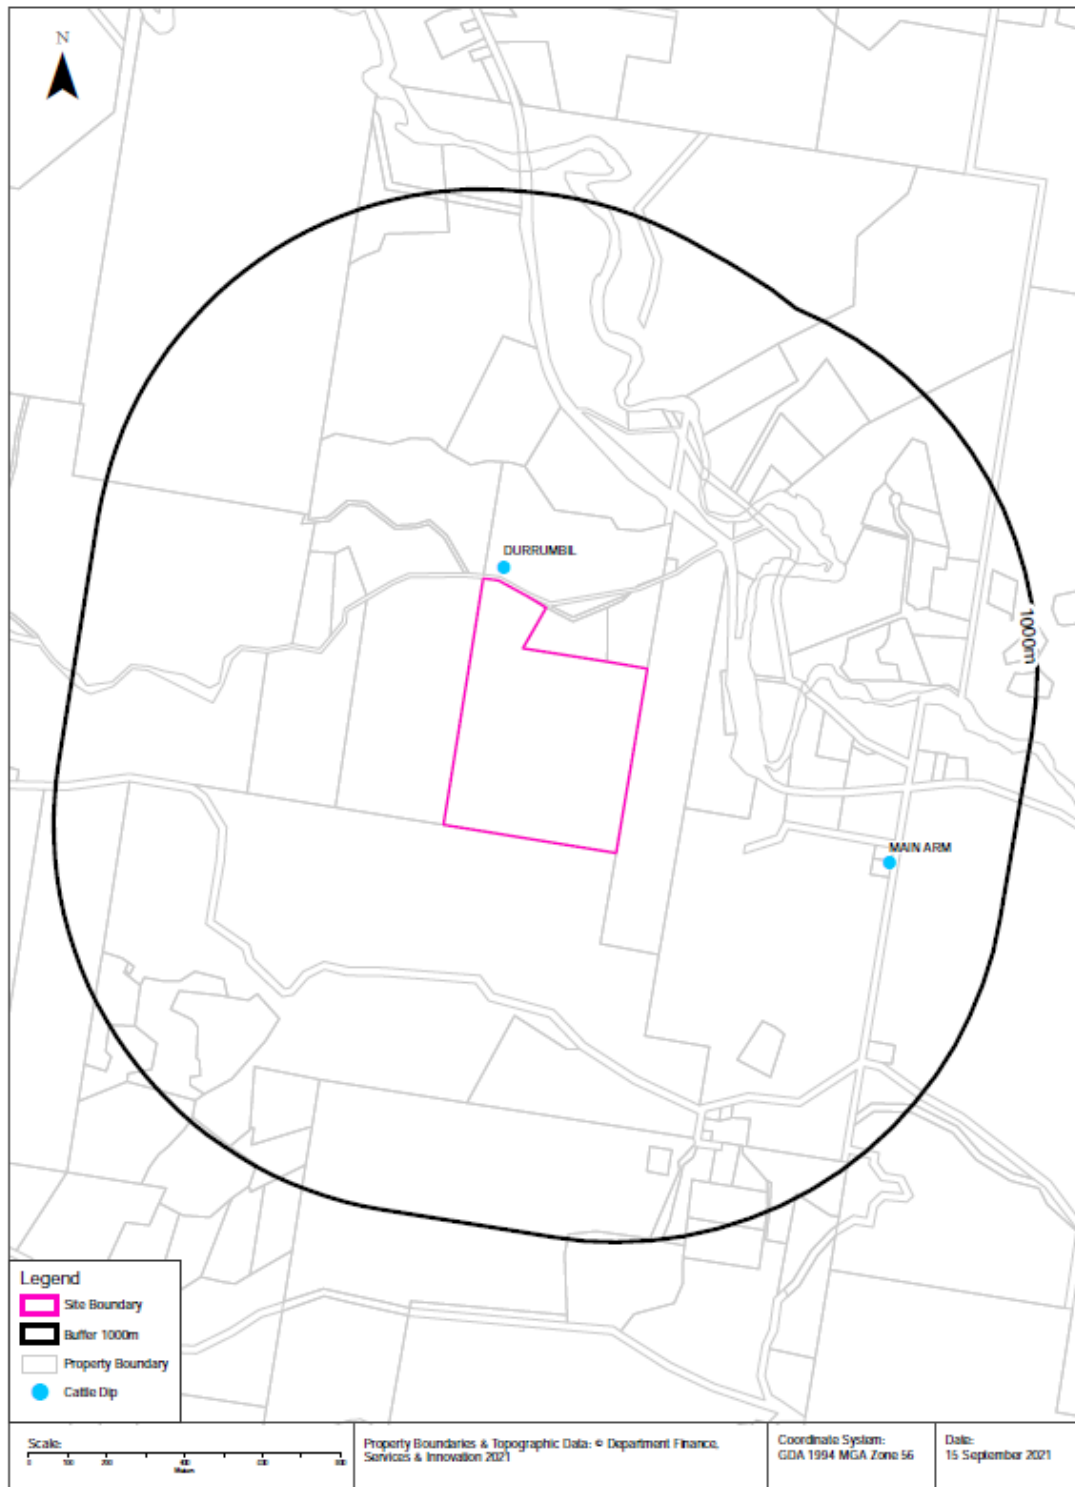

4.4.3 Cattle Tick Dip Sites

A search of the NSW Department of Primary Industry (DPI) Cattle Dip Site Locator tool

(<https://www.dpi.nsw.gov.au/animals-and-livestock/beef-cattle/health-and-disease/parasitic-andprotozoal-diseases/ticks/cattle-dip-site-locator>) indicated that the former Durrumbil cattle dip site has been decommissioned and is located on the northern side of Settlement Road, (Lot 4 DP 585928) approximately 173m north west of the existing dwelling on the subject site and therefore within the 200m radius NSW EPA investigation zone.

According to the NSW DPI *Decommissioned* – means all the standing structures, shed, fencing and roof have been dismantled. The bath itself, if present, is emptied of all chemical fluid and may have contaminated timbers from the roof and draining pen put into it and then is capped with concrete lids. The bath may have already been demolished prior to decommissioning in which case it is usually smashed and buried. An information plaque is attached to one of the concrete lids to indicate its

Departmental file number, dip name and direction of the dipping. Clean soil may be spread around the bath to run flush with the bath edge and then grassed. The draining pen concrete floor is usually left intact so as not to disturb the possibly contaminated soil.

A series of chemicals including arsenic, DDT, Dioxathion, Dioathion Chlordimeform and Amitraz were used in the dipsite from 1945 until 1976.

Chemical Details

IMPORTANT NOTE: Chemical history has been retrieved from a copied laboratory log. In some cases it may be confirmed by entries in the hard copy lease folder but generally the chemical record is based on this single lab document. It is possible that there are inaccuracies as well as errors made

Chemicals used in dip bath	Date first used
ARSENIC	8/45
DDT	12/60
DIOXATHION	10/62
DIOXATHION CHLORDIMEFORM	10/73
AMITRAZ	12/76

4.5 Underground services and stormwater

Underground assets such as electricity and communications provide preferential pathways for contaminant migration.

4.6 Integrity Assessment

The site history information documented above is generally consistent with the aerial photographs, and the physical condition of the site. Based on the information available, TFA considers that sufficient historical information and site condition information has been obtained to allow for a thorough investigation of the environmental condition of the site.

5. Sampling & Quality Assurance Plan

5.1 Overview of DQO Process

The DQOs process is a planning tool developed to ensure that any data collected is of sufficient quality and quantity to support defensible decision making. It is a process used to define the type, quantity and quality of data needed to support decisions relating to the environmental condition of a site and provides a systematic approach for defining the criteria that a data collection design should satisfy.

It is recognised that the most efficient way to accomplish these goals is to establish criteria for defensible decision making before the data collection begins, and then develop a data collection design based on these criteria. By using the DQOs process to plan the investigation effort, the relevant parties can improve the effectiveness, efficiency and defensibility of a decision in a resource and cost-effective manner. DQOs have been developed to detail the type of data that is needed to meet the overall objectives of this project. The DQO's presented in this document have been developed with procedures stated in the following guidelines:

Prior to conducting site works, TFA undertook the data quality objectives (DQOs) planning process.

Table 5.1 DQOs Planning Process Output – Estimation Process

Step 1 – State the problem Summarise the contamination problem that will require new environmental data and identify the resources available to resolve the problem.						
1.1	Write a brief summary of the contamination problem: A Preliminary Site Investigation under Chapter 4 Remediation of Land (SEPP Resilience and Hazards 2021) has been triggered by the Planning Proposal to Byron Shire Council (BSC) to amend the Byron Local Environmental Plan (BLEP) 2014 to formalise the use of the existing dwelling and detached dual occupancy dwelling. The subject site is located on land used for bananas and passionfruit cultivation where herbicides, pesticides and fertilisers have been applied, the soil therefore has the potential to have associated contamination, as well as being located within the EPA Investigation zone for the former Durrumbil cattle dipsite. Potential contaminants of concern include pesticides, herbicides, OCP, OPP, and heavy metals.					
1.2	Identify members of the planning team:					
	Person	Organisation		Role		
	Tim Fitzroy	TFA		Project Director		
	Jacob Fitzroy	TFA		Environmental Economist		
1.3	Develop/refine the conceptual site model (CSM) (see Figure 3): A graphical representation of the conceptual site model for the site is included as Figure 3. Details are included of historical land use and areas of concern.					
1.4	Define the summary exposure scenarios (Y/N)*:					
	Soil/Dust	Y	Groundwater	Y	Surface Water	Y

Step 1 – State the problem

Summarise the contamination problem that will require new environmental data and identify the resources available to resolve the problem.

	Dermal	R/M	Dermal		Dermal	-
	Ingestion	R/M	Ingestion		Ingestion	-
	Inhalation	R/M	Inhalation		Inhalation	-
	Ecological	-	Ecological	R/M	Ecological	Y
* R = residential, RC = recreational, C = commercial worker, M = maintenance worker (i.e., during site works/construction); B = local bores add additional if required						

Step 2 - Identify the decision

To identify the decision that requires new environmental data to address the contamination problem.

2.1	If identified Contaminants of Concern are detected in soils or groundwater exceed Tier 1 or Tier 2 Risk Assessment Criteria. If the 95% UCL does not exceed Tier 1 of Tier 2 Risk Assessment Criteria a Human health/ ecological pathway is considered to not exist.
-----	--

Step 3 – Identify the inputs to the decision

To identify the information that will be required to support the decision and specify which inputs require new environmental measurements.

	Identify the information that will be required to resolve the decision statements, including existing information and new environmental data, and identify the sources for each item of information required:
	Existing information:
	No previous reports for this property
	New environmental data:
3.1	Measurements of soil, groundwater contamination concentrations with potential contaminants of concern (PCOCs). Soil 16 metals (silver, arsenic, lead, cadmium, chromium, copper, manganese, nickel, selenium, zinc, mercury, iron, aluminium, beryllium, boron and cobalt), organochlorine pesticides (OCPs) and organophosphorus pesticides (OP's).
3.2	Identify the information needed to establish the action level: For soil HIL A residential in NEPM, 2013 has been applied
3.3	Confirm that appropriate analytical methods exist to provide the necessary data: Feasible analytical methods, both field and laboratory will be consistent with existing guidance including being in accordance with NEPM, 1999. Laboratories to be used are NATA accredited and use analytical methods based on USEPA and APHA methods.

Step 4 - Define the boundaries of the study To define the spatial and temporal boundaries that the data must represent to support the decisions.	
	Specify the characteristics that define the population of interest:
4.1	The investigation area is currently limited areas on the site to the areas that are currently not occupied by building structures and underground services Investigation areas are presented in Figure 2.
4.2	Define the geographic area and media to which the decision statement applies: The investigation boundary is shown on Figure 1. Media is also stratified depending on the nature of the material encountered (i.e., fill material/natural soil)
4.3	When appropriate, divide the populations into strata that have relatively homogenous characteristics: Populations consist of, fill material, natural soil, and groundwater beneath the site.
4.4	Determine the time frame to which the decision applies: This timeframe may be affected by other external factors, which may include the following: Access to Driller Inclement weather delaying progress
4.5	Determine when to collect data: Rain or flood conditions will likely limit access. Works will be undertaken during normal working hours.
4.6	Define the scale of the decision making: Update as required
4.7	Identify any practical constraints on data collection: The following constraints are likely to impact data collection: Rain and flood conditions will likely limit access Presence of underground services Advancement into areas cleared of building structures and underground services grass areas only

Step 5 - Develop the analytic (statistical) approach Develop a logical "if ..., then ..., else ..." statement that defines the conditions that would cause the decision maker to choose among alternative actions.	
5.1	Specify the statistical parameter that characterises the population of interest, such as mean, median, maximum or proportion, etc.: The 95% UCL for will be the key characteristic. Other data evaluation will entail: No sample will exceed 250% of the criteria Standard deviation will be < 50% criteria 95% UCL is < criteria
5.2	Specify the action level for the decision: Analytical actions levels based on residential criteria with garden/accessible soil (home-grown produce < 10% fruit and vegetable and no poultry) in NEPM 1999, amended 2013. The criteria is not clean-up criteria; therefore, exceedances will be screened to determine whether further investigation is required.
5.3	Confirm that measurement detection will allow reliable comparisons with the action level: Samples will be collected and submitted for NATA accredited laboratory analysis to determine site conditions. Standard limits of reporting (LOR) are less than the criteria.
5.4	Combine the outputs from the previous DQOs steps and develop an "if ..., then ..., else ..." theoretical decision rule based on the chosen action level: If the statistical parameters of the data exceed applicable action levels, further remediation/assessment or management will be required at the site. If not, no further remediation will be required at the site.

Step 6 – Specify performance or acceptance criteria To specify probability limits for false rejection and false acceptance decision errors.	
6.1	Specify the decision rule as a statistical hypothesis test: Null hypothesis (HO) is the 95% UCL for concentration for soil is > action level; and Alternative hypotheses (HA) the 95% UCL for concentration for soil is ≤ action level.
6.2	Examine consequences of making incorrect decisions from the test: False rejection or Type I error of determining the site is suitable when it is not (wrongly rejects a true HO). Consequence is potential risks to human health and/or the environment. False acceptance or Type II error of determining the site is not suitable when it is (wrongly accepts a false HO). Consequence is unnecessary expenditure of resources or a site not being used for its highest value.
6.3	Place acceptable limits on the likelihood of making decision errors: Decision errors occur when accurate analytical results generated from tiny samples (sampling unit) are assumed to represent the concentrations of much larger volumes of matrix, but that extrapolation is invalid because confounding variables have not been acknowledged or controlled. No sample result will exceed 250% of the criteria. Standard deviation will be < 50% criteria. 95% UCL is < criteria.

Step 7 – Optimise the design for obtaining data To identify a resource effective sampling and analysis design for generating data that are expected to satisfy the DQOs.				
7.1	Document the final sampling and analysis design, along with a discussion of the key assumptions underlying this design: Refer to SAQP section of report.			
7.2	Detail how the design should be implemented, together with contingency plans for unexpected events: Refer to SAQP section of report.			
7.3	Determine the quality assurance and quality control (QA/QC) procedures that would be performed to detect and correct problems to ensure defensible results: The field QA, and the field and laboratory QC, are described in the sampling, analysis and quality plan (SAQP). In summary, the following QC soil and groundwater samples are proposed in accordance with the NEPM 2013.			
	Field QC samples	Lab QC samples		
	Blind duplicate	≥ 5%	Lab blank	≥ 1/lab batch
	Blind triplicate	≥ 5%	Surrogate spike	
			LCS	≥ 1/lab batch
	Trip blank (vol)	≥ 1/field batch	Matrix spike	≥ 1/media type
		Lab duplicate	≥ 10%	
7.4	Document the operational details and theoretical assumptions of the selected design in the sampling, analysis, and quality plan (SAQP):			

5.2 Possible Contaminant Sources

Despite the lack of recent use of chemicals at the site, historical use is likely at the site. **Table 5.2** below lists the sources of potential contamination at the site and their associated contaminants of concern. The site has been subject to a number of lands

uses that have the potential to be contaminating activities. Based on the site history information, site inspection and surrounding land uses, the potentially contaminating activities were identified as:

- Pesticides, Herbicides, OCP, OPP, and heavy metals used on banana and passionfruit
- Herbicides used on cattle grazing land

Table 5.2 Potential Contaminants of Concern for Identified Activities

Potential contaminants of concern (PCOC) related to these suspected activities are presented below

Potential contaminants of concern (PCOC)	Suspected Activities (source)
Organochlorine/organophosphorus pesticide	used in pesticides for cropping
Heavy Metals	metals including arsenic, cadmium, chromium, copper, lead, nickel, zinc, mercury. Found in pesticides, and many waste products.

Technical guidance considered in preparing these DQOs **includes:**

- NSW EPA (formerly Office of Environment and Heritage (OEH) (2011) Guidelines for Consultants Reporting on Contaminated Sites.
- NSW EPA (2017) Guidelines for the NSW Site Auditor Scheme (3rd edition).
- NSW EPA (2012) Guidelines for the Assessment and Management of Sites Impacted by Hazardous Ground Gases.
- National Environment Protection Council (NEPC) National Environment Protection
- (Assessment of Site Contamination) Measure 1999 (ASC NEPM (2013) – Schedule
- B2: Guideline on Site Characterisation (2013).

5.3 Relevant Environmental media

The environmental media considered relevant for the investigation consisted of site soil.

5.4 Relevant Environmental Criteria

5.4.1 Soil (General Contaminates)

For soil, the appropriate and adopted criteria are based on the ASC NEPM 2013, in particular the health investigation levels (HILs), environmental investigation levels (EILs), environmental screening levels (ESLs) applicable for residential A land use.

Residential land use criteria has been adopted as the proposed development will be residential for both HIL and HSL

HSLs and ESLs – soil type

Based on the nature of the soil, clay soil criteria have been used as the soil type for deriving the HSLs and ESLs.

6. Site Assessment

6.1 Preliminary Site Investigations

The field work was undertaken in general accordance with the DQOs. Field works were conducted on:

- 14 October 2021 for the soil investigation

All fieldwork was completed by Tim Fitzroy. The sampling and analytical strategy and methodology are described below. The results of the assessment are provided in Section 7. Soil sample locations are shown on **Figure 5**. On the days of the site assessments the weather was fine. Photographs of the subject site can be seen in **Appendix B**.

6.2 Visible Signs of Contamination

The Investigation Area was assessed on foot in order to identify any signs of contamination. In general, no obvious signs of contamination (such as plant stress, surface spills, waste materials, odours etc.) were evident during the site investigation.

6.3 Odours

There were no obvious odours akin to contamination observed during site inspections.

6.4 Flood Potential

There is no likely of flooding on the subject site.

6.5 Presence of Drums, Wastes and Fill Material

There was no evidence of drums, waste and fill material.

6.6 Methodology

The objective of this preliminary investigation is to gather information with regard to the type, location, concentration and distribution of contaminants to determine if the subject site represents a risk of harm to end users and sensitive receptors. To determine this, soil sampling and laboratory analysis has been conducted upon surface soils collected from the study area.

The following sampling, analysis and data quality objectives have been adopted for this site investigation:

- to confirm the soils in the vicinity of the existing dwelling and farm shed at the site do not pose a risk to human health or the environment through soil contamination.
- to employ quality assurance when sampling, assessing and during evaluation of the subject soils.

- to ensure that decontamination techniques are applied during the sampling procedure and that no cross contamination of samples occurs.

6.6.1 Soil (general contaminants)

Soil sampling around the existing dwelling was restricted due to existing hard landscaping and decks and a gully to the east and north. Sampling was undertaken in close proximity of the dwelling to the west and south. NSW EPA, 1997 states that for a site of 2,000 sq. m, 8 sample points are required. The frequency of locations sampled is in line with the minimum sampling requirements for circular hotspots.

Soil sampling was also undertaken around the detached dual occupancy dwelling. A total of 8 soil samples were collected from the vicinity of the detached dual occupancy dwelling.

The sample locations TFA1- TFA16 had representative samples collected from each location using the methodology described in the following sections. All samples were tested individually plus 2 QA samples (1 field sample and 1 laboratory duplicate).

Systematic sampling pattern was adopted within the vicinity of the dwelling and detached dual occupancy dwelling sites (see **Figure 4A** and **4B**).

In accordance with the Sampling Design Guidelines, the following sampling method was used:

- The sampling procedure utilised in this investigation was in accordance with AS 4482.1 – 2005.
- Eight (8) surface soil samples were collected (TFA1-TFA8) from around the dwelling.
- Eight (8) surface soil samples were collected (TFA9-TFA16) from around the detached dual occupancy dwelling.
- Two Quality Assurance samples were also collected.
- All samples were collected from the surface soil horizon between 0 and 150 mm below the surface using a 70 mm diameter hand auger.
- The soil samples were sent to the Environmental Analysis Laboratory (EAL); for analysis and determination of residual metals, chemicals and organo-chlorines and organophosphate concentrations.
- All soil samples were placed into an esky with ice bricks, and delivered to the Environmental Analysis Laboratory at Southern Cross University, Lismore. Metals analysis was conducted by EAL and quality control. Analysis is conducted using a Perkin Elmer ELANDRC-e ICPMS (Inductively Coupled Plasma Mass Spectrometry). Chain of custody forms, laboratory quality assurance and laboratory quality control documentation are available on request.
- The analysis of pesticides was subcontracted to the NATA-registered Labmark laboratory.
- Chain of Custody forms, which identified the sample identification codes, the collection dates and the type of analysis to be undertaken were fully completed and delivered with the samples (see **Appendix C**).
- Residual samples were stored, frozen and retained by *Environmental Analysis Laboratory* pending the need for additional or repeat analysis.
- Laboratory Results are available in **Appendix D**.

6.7 Data Usability

A background to data usability is provided in **Appendix E**. All site work was completed in accordance with standard *TFA sampling protocols*, including a QA/QC programme and standard operating procedures.

A data usability assessment has been performed for the sampling undertaken during this investigation, as summarised in **Appendix E** and includes:

- Summary of field quality assurance/quality control
- Field quality control soil samples summary
- Summary of laboratory quality assurance/quality control.

Following this discussion, the data usability assessment shows that the data is of suitable quality to support the conclusions made in this report.

6.8 Conditions Encountered

The site is an irregular shape and is located on the southern side of Settlement Road. The site is undulating ranging from 130m AHD in the south to 40m AHD in the north interspersed with a series of gullies. Surface soil conditions comprised medium clay to clay loam.

- Dwelling

The existing dwelling is about 20 years old comprising, timber floor, metal roof and manufactured board. The perimeter of the dwelling is extensively landscaped to the north and east including paving plus a timber deck extending to the south. Soil sampling around the existing dwelling was restricted due to existing hard landscaping and decks and a gully to the east and north.

- Detached dual occupancy dwelling.

The detached dual occupancy dwelling comprises timber floor, metal roof and manufactured board. It is our understanding that the shed was originally used for packing of bananas.

7. Analytical Results

7.1 Soil

Table 7.1 Summary Results Laboratory Analysis of Soil for Metals, OCs & OPs

Analyte	Health Criteria 0m to <1m	Ecological Criteria	Management Limits	Site Data			
	HIL/HSL mg/kg	EIL/ESL (mg/kg)	ML (mg/kg)	No. samples analysed	Number of exceedances	Max mg/kg	Meets Screening criteria?
Heavy Metals							
(Arsenic)	100	100	NA	18	0	26	Yes
(Lead)	300	1,100	NA		0	87	Yes
Cadmium	20	-	NA		0	<0.5	Yes
Chromium	100	410	NA		0	11	Yes
Copper	6,000	230	NA		0	45	Yes
Nickel	400	270	NA		0	11	Yes
Zinc	7,400	770	NA		0	230	Yes
Mercury	40	-	NA		0	0.13	Yes
OCs							
(Endrin)	10	NL	NA	18	0	<0.1	Yes
(Dieldrin)	6	NL	NA		0	<0.1	Yes
(DDD, DDE and DDT)	240	180	NA		0	<0.2	Yes

The analytical results are presented in the Soil Analytical Data Table 7.1 and in the laboratory, analysis indicate compliance with the Health Investigation Levels (HILA) and Ecological Investigation Levels (EILs) outlined in NEPM 1999 (2013) (see **Appendix D**).

8. Discussion and Conceptual Site Plan

8.1 Discussion

The results of preliminary assessment of the subject site indicate compliance with the National Environment Protection Measure (NEPM 2013) HILA *Residential with garden/accessible soil also includes children's day care centres, preschools and primary schools* and *Ecological Soil Investigation Levels* and Ecological Screening Levels (HSL's) (NEPM 2013).

A Conceptual Site model has been prepared with respect to the proposed investigation.

8.2 Conceptual Site Model

The conceptual site model (CSM) is a representation of site-related information regarding contamination sources, receptors and exposure pathways between those sources and receptors. The CSM for the site, following the site investigation is detailed in Table 8.1 below.

Table 8.1 CSM Discussion

Element	Site Specific Information
Potential sources of contamination and contaminants of concern.	Metals, and chemicals may be present from banana and passionfruit production and cattle dip-site.
Potentially affected media, such as recovered aggregate and soil.	Media consists of soil.
Human and ecological receptors.	Potential human & ecological receptors include: <ul style="list-style-type: none">• Construction workers;• Residents• Brunswick River
Potential and complete exposure pathway to human and/or environmental receptors.	<ul style="list-style-type: none">• Subsurface infrastructure.

Based on the results of this assessment, the likelihood for chemical contamination to be present within proximity of the existing dwelling and detached dual occupancy dwelling is considered to be low.

9. Conclusions

This investigation is Tier 1 - preliminary site investigation, which is required to determine if contamination of the site's soil has occurred from past land usage in accordance with NEPM 1999 (2013), DUAP and EPA (1998). The investigation includes obtaining a history of land usage on the site and a preliminary soil-sampling regime. The results of the soil sample and groundwater analysis are compared with the Health Investigation Levels (HIL's) and Ecological Investigation Levels (EILs) outlined in NEPM 1999 (2013).

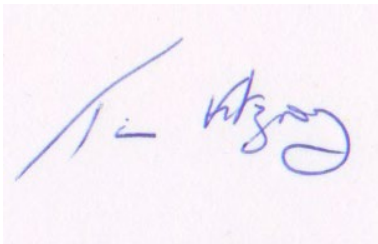

A search of the NSW Department of Primary Industry (DPI) Cattle Dip Site Locator tool (<https://www.dpi.nsw.gov.au/animals-and-livestock/beef-cattle/health-and-disease/parasitic-andprotozoal-diseases/ticks/cattle-dip-site-locator>) indicated that the former Durrumbil cattle dip site has been decommissioned and is located on the northern side of Settlement Road, Lot 4 DP 585928, approximately 173m north west of the existing dwelling on the subject site and therefore within the 200m radius NSW EPA investigation zone.

A total of sixteen boreholes (TFA1-TFA16 plus 2 QA samples) within proximity of the existing dwelling and detached dual occupancy dwelling were analysed for 16 metals (silver, arsenic, lead, cadmium, chromium, copper, manganese, nickel, selenium, zinc, mercury, iron, aluminium, beryllium, boron and cobalt), organochlorine pesticides (OCPs) and organophosphorus pesticides (OP's).

All of the soil samples show contaminant levels well below the most stringent Australian and New Zealand Environment and Conservation Council (ANZECC), National Environment Protection Measure (NEPM 2013) HILA Residential with garden/accessible soil and Ecological Soil Investigation Levels (NEPM 2013).

Based on the outcomes of this PSI there is no impediment to approval of the Planning Proposal to amend the Byron Local Environmental Plan (BLEP) 2014 to formalise the use of the existing dwelling and the detached dual occupancy dwelling located at Lot 5 DP585928, No 55 Settlement Road, Main Arm.

This report has been prepared by Tim Fitzroy of Tim Fitzroy & Associates.

Tim Fitzroy
Environmental Health Scientist
Environmental Auditor

Disclaimer:

The purpose of this report is to provide an overview of some of the site history, environmental risk and planning information available, affecting an individual address or geographical area in which the property is located. It is not a substitute for an on-site inspection or review of other available reports and records. It is not intended to be, and should not be taken to be, a rating or assessment of the desirability or market value of the property or its features.

You should obtain independent advice before you make any decision based on the information within the report.

The detailed terms applicable to use of this report are set out at the end of this report.

Dataset Listing

Datasets contained within this report, detailing their source and data currency:

Dataset Name	Custodian	Supply Date	Currency Date	Update Frequency	Dataset Buffer (m)	No. Features On-site	No. Features within 100m	No. Features within Buffer
Cadastre Boundaries	NSW Department of Finance, Services & Innovation	20/08/2021	20/08/2021	Quarterly	-	-	-	-
Topographic Data	NSW Department of Finance, Services & Innovation	25/06/2019	25/06/2019	As required	-	-	-	-

Contaminated Land

55 Settlement Road, Main Arm, NSW 2482

List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist	Direction
N/A	No records in buffer								

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.

Elevation Contours (m AHD)

55 Settlement Road, Main Arm, NSW 2482

Legend

- Elevation Contour (m AHD)
- Site Boundary
- Buffer 1000m
- Property Boundary

Accuracy & Currency: This contour data can be up to 0.4 of the contour interval out in height and must therefore not be used for any design or engineering works, but only as a general guide to topography. Gaps may occur along contour lines due to vertical topography, obscured topography in the source photography such as buildings, dense vegetation or dead ground, or the fact that original buildings have been replaced in the intervening thirty years since the original contour capture.

Atlas of Australian Soils

Soil mapping units and Australian Soil Classification orders within the dataset buffer:

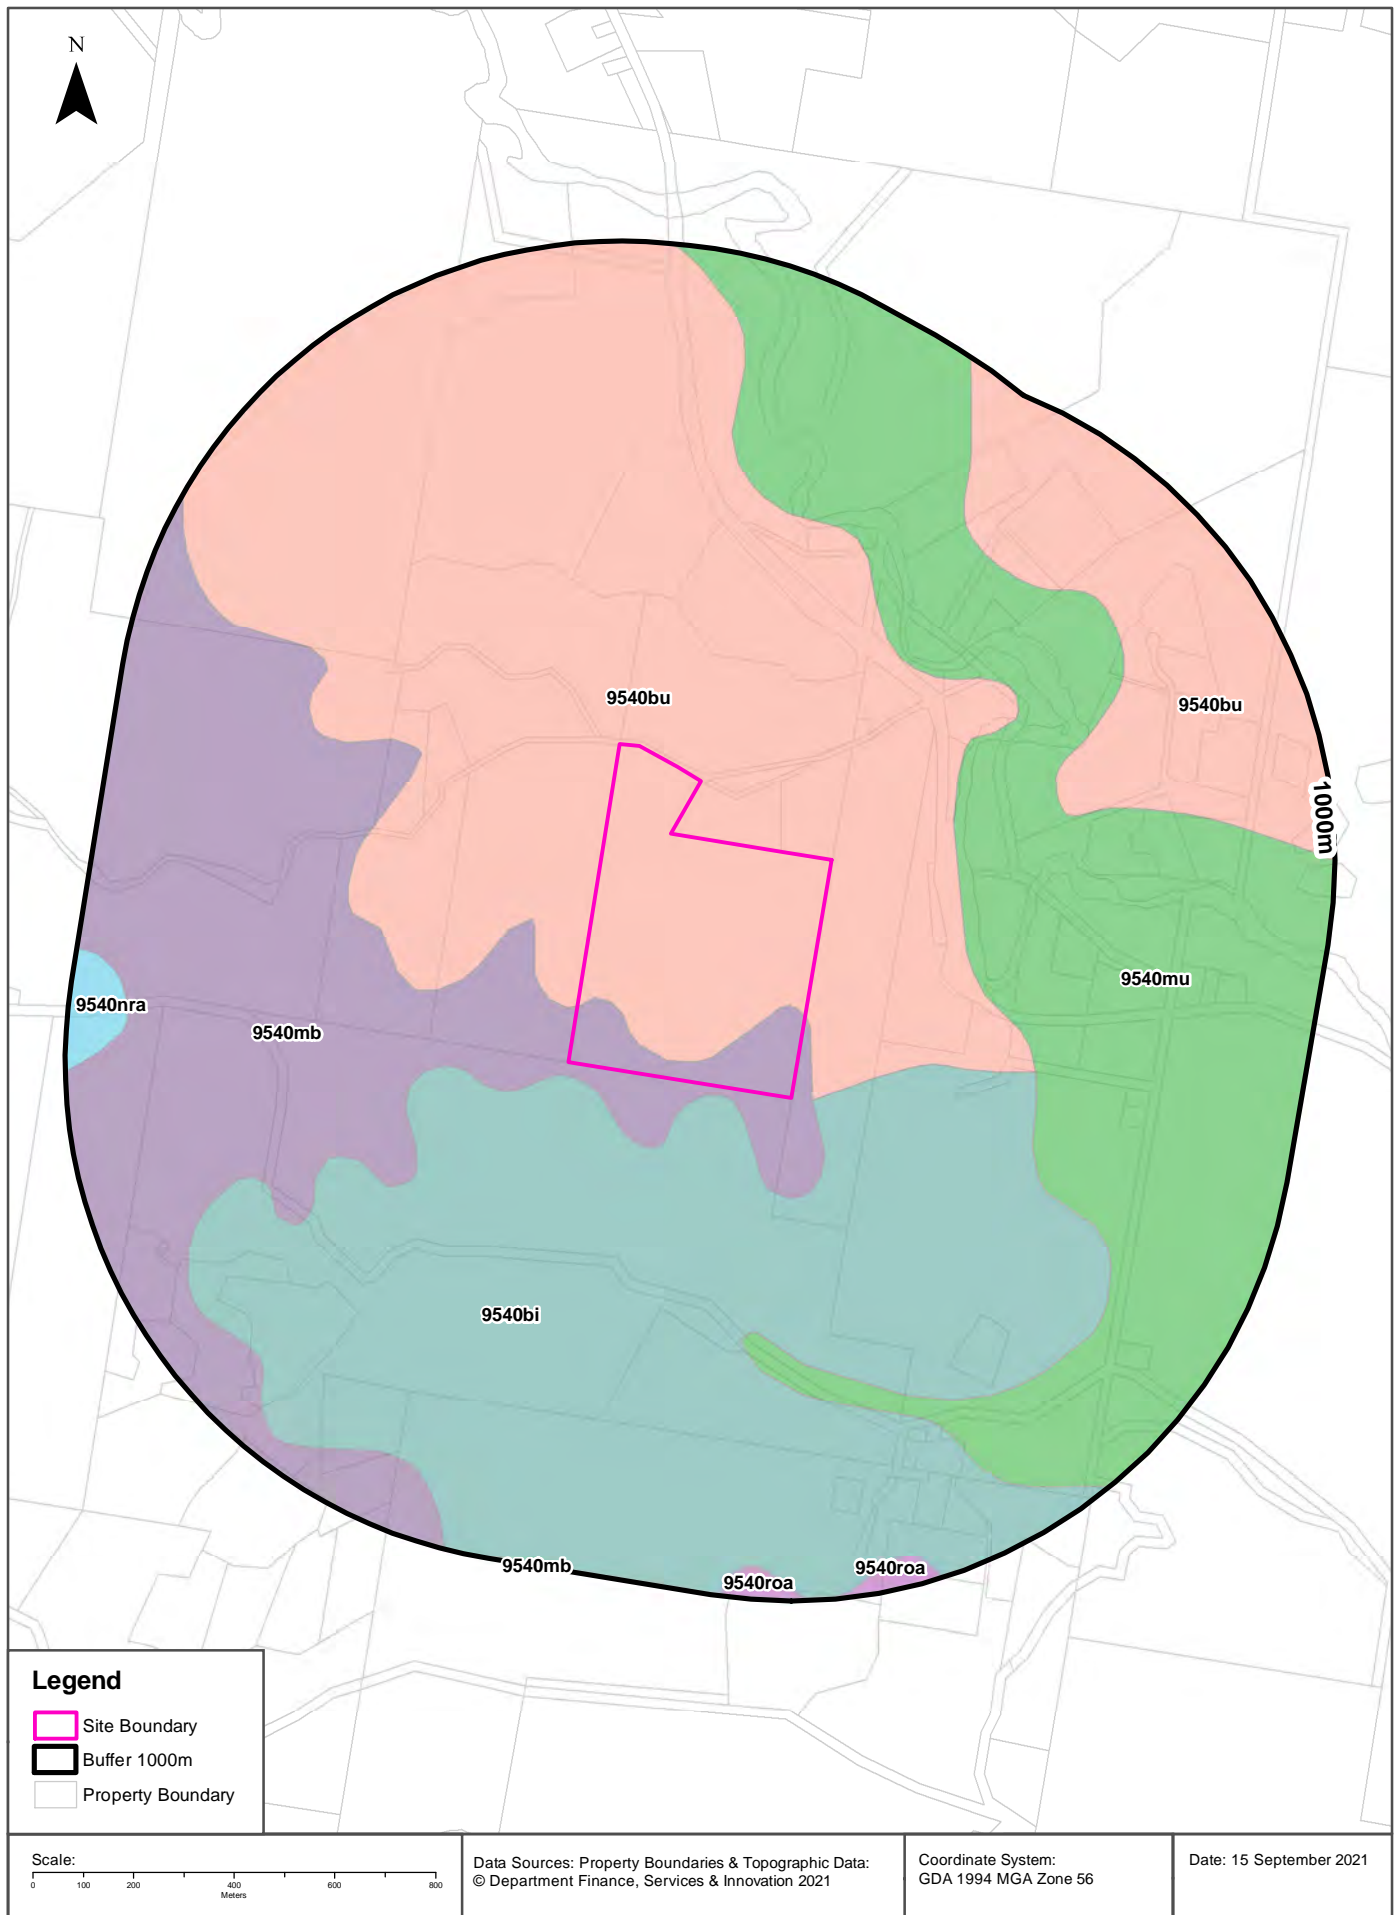

Map Unit Code	Soil Order	Map Unit Description	Distance	Direction
Mf5	Dermosol	Hilly to steep hilly with narrow valleys along the streams: moderate to steep slopes of yellow leached friable earths (Gn3.74) and (Gn3.84) with red friable earths (Gn3.14) often codominant. Associated are: shallow soils such as (Um4.1 and Um4.2), and (Uc4.1) on hill crests and upper slopes; (Dr2.21), (Dy3.21), and related soils on the drier more exposed mid to lower slopes; and some areas of (Gn2.14) soils and minor occurrences of other undescribed soils. The whole area is traversed by narrow valleys or variable soils, largely undescribed but including (Um6.11) on terraces and (Dg4) and (Dy5) on flood-plains.	0m	On-site
Mg27	Ferrosol	Mountainous--rugged plateau remnants and mountain peaks at moderate to high elevation (> 1000 ft): soils almost unknown, available data suggest a complex soil population with (i) red and brown friable porous earths (Gn4.11) and (Gn4.31 and Gn4.34) on moderate slopes and broader ridge tops; (ii) dark friable porous earths (Gn4.41 and Gn4.42) on the steeper slopes and narrow ridge tops, (iii) shallow soils such as (Uc4), (Um4), and (Um6) on steep slopes with rock outcrops and bare rock walls; and (iv) a variety of other soils including (Dr4), (Dy4), and (Gn3.2) on moderate slopes. (iii) and (iv) are more common on the less basic rock types.	713m	South West

55 Settlement Road, Main Arm, NSW 2482

NSW BioNet Atlas

Species on the NSW BioNet Atlas that have a NSW or federal conservation status, a NSW sensitivity status, or are listed under a migratory species agreement, and are within 10km of the site?

Kingdom	Class	Scientific	Common	NSW Conservation Status	NSW Sensitivity Class	Federal Conservation Status	Migratory Species Agreements
Animalia	Amphibia	Assa darlingtoni	Pouched Frog	Vulnerable	Not Sensitive	Not Listed	
Animalia	Amphibia	Crinia tinnula	Wallum Froglet	Vulnerable	Not Sensitive	Not Listed	
Animalia	Amphibia	Mixophyes fleayi	Fleay's Barred Frog	Endangered	Category 2	Endangered	
Animalia	Amphibia	Philoria loveridgei	Loveridge's Frog	Endangered	Category 2	Not Listed	
Animalia	Aves	Amaurornis moluccana	Pale-vented Bush-hen	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Anseranas semipalmata	Magpie Goose	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Anthochaera phrygia	Regent Honeyeater	Critically Endangered	Not Sensitive	Critically Endangered	
Animalia	Aves	Apus pacificus	Fork-tailed Swift	Not Listed	Not Sensitive	Not Listed	ROKAMBA;CAMBA; JAMBA
Animalia	Aves	Atrichornis rufescens	Rufous Scrub-bird	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Botaurus poiciloptilus	Australasian Bittern	Endangered	Not Sensitive	Endangered	
Animalia	Aves	Burhinus grallarius	Bush Stone-curlew	Endangered	Not Sensitive	Not Listed	
Animalia	Aves	Callocephalon fimbriatum	Gang-gang Cockatoo	Vulnerable	Category 3	Not Listed	
Animalia	Aves	Calyptorhynchus lathamii	Glossy Black-Cockatoo	Vulnerable	Category 2	Not Listed	
Animalia	Aves	Carterornis leucotis	White-eared Monarch	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Chthonicola sagittata	Speckled Warbler	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Circus assimilis	Spotted Harrier	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Climacteris picumnus victoriae	Brown Treecreeper (eastern subspecies)	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Coracina lineata	Barred Cuckoo-shrike	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Cuculus optatus	Oriental Cuckoo	Not Listed	Not Sensitive	Not Listed	ROKAMBA;CAMBA; JAMBA
Animalia	Aves	Cyclopsitta diophthalma coxeni	Coxen's Fig-Parrot	Critically Endangered	Category 2	Endangered	
Animalia	Aves	Daphoenositta chrysoptera	Varied Sittella	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Dasyornis brachypterus	Eastern Bristlebird	Endangered	Category 2	Endangered	
Animalia	Aves	Ephippiorhynchus asiaticus	Black-necked Stork	Endangered	Not Sensitive	Not Listed	
Animalia	Aves	Erythroriorchis radiatus	Red Goshawk	Critically Endangered	Category 2	Vulnerable	
Animalia	Aves	Falco subniger	Black Falcon	Vulnerable	Not Sensitive	Not Listed	
Animalia	Aves	Gallinago hardwickii	Latham's Snipe	Not Listed	Not Sensitive	Not Listed	ROKAMBA;JAMBA
Animalia	Aves	Glossopsitta pusilla	Little Lorikeet	Vulnerable	Not Sensitive	Not Listed

Location Confidences

Where Lotsearch has had to georeference features from supplied addresses, a location confidence has been assigned to the data record. This indicates a confidence to the positional accuracy of the feature. Where applicable, a code is given under the field heading "LC" or "LocConf". These codes lookup to the following location confidences:

LC Code	Location Confidence
Premise Match	Georeferenced to the site location / premise or part of site
Area Match	Georeferenced to an approximate or general area
Road Match	Georeferenced to a road or rail corridor
Road Intersection	Georeferenced to a road intersection
Buffered Point	A point feature buffered to x metres
Adjacent Match	Land adjacent to a georeferenced feature
Network of Features	Georeferenced to a network of features
Suburb Match	Georeferenced to a suburb boundary
As Supplied	Spatial data supplied by provider

USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report (Terms). The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

1. End User acknowledges and agrees that:
 - (a) the Report is compiled from or using content (**Third Party Content**) which is comprised of:
 - (i) content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available or methodologies licensed to Lotsearch by third parties with whom Lotsearch has contractual arrangements (**Third Party Content Suppliers**); and
 - (ii) content which is derived from content described in paragraph (i);
 - (b) Neither Lotsearch nor Third Party Content Suppliers takes any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report including any contaminated land assessment or other assessment included as part of a Report;
 - (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**) and accordingly neither Lotsearch nor Third Party Content Suppliers gives any warranty in relation to the accuracy or completeness of the Third Party Content incorporated into the report including any contaminated land assessment or other assessment included as part of a Report;
 - (d) Reports are generated at a point in time (as specified by the date/time stamp appearing on the Report) and accordingly the Report is based on the information available at that point in time and Lotsearch is not obliged to undertake any additional reporting to take into consideration any information that may become available between the point in time specified by the date/time stamp and the date on which the Report was provided by Lotsearch to the purchaser of the Report;
 - (e) Reports must be used or reproduced in their entirety and End User must not reproduce or make available to other persons only parts of the Report;
 - (f) Lotsearch has not undertaken any physical inspection of the property;
 - (g) neither Lotsearch nor Third Party Content Suppliers warrants that all land uses or features whether past or current are identified in the Report;
 - (h) the Report does not include any information relating to the actual state or condition of the Property;
 - (i) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of Land or Property for any particular purpose
 - (j) the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
 - (k) the End User should undertake its own inspections of the Land or Property to satisfy itself that there are no defects or failures
2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
4. The End User hereby to the maximum extent permitted by law:
 - (a) acknowledges that the Lotsearch (nor any of its officers, employees or agents), nor any of its Third Party Content Supplier have any liability to it under or in connection with the

- Report or these Terms;
- (b) waives any right it may have to claim against Third Party Content Supplier in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms; and
 - (c) releases each Third Party Content Supplier from any claim it may have otherwise had in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms.
5. The End User acknowledges that any Third Party Supplier shall be entitled to plead the benefits conferred on it under clause 4, despite not being a party to these terms.
 6. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
 7. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
 8. To the extent permitted by law and subject to paragraph 9, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these Terms other than as expressly set out in these Terms are excluded.
 9. Subject to paragraph 6, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
 10. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
 11. Subject to paragraph 9, neither Lotsearch nor the End User is liable to the other for:
 - (a) any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to the Report or these Terms; or
 - (b) any loss of profit, loss of revenue, loss of interest, loss of data, loss of goodwill or loss of business opportunities, business interruption arising directly or indirectly out of or in relation to the Report or these Terms,irrespective of how that liability arises including in contract or tort, liability under indemnity or for any other common law, equitable or statutory cause of action or otherwise.
 12. These Terms are subject to New South Wales law.

E Data Usability Assessment and Quality Assurance

Data Usability Summary Assessment

All site work was completed in accordance with standard *TFA sampling protocols*, including a quality assurance/quality control (QA/QC) programme and standard operating procedures.

A data usability assessment was performed for the soil data collected by TFA, as summarised in the following tables:

- Table E.1, field QC samples summary,
- Table E.2, summary of field QA/QC, and
- Table E.3, summary of laboratory QA/QC.

Table I.1: Field quality control samples summary

	Total samples	Field duplicates	Lab duplicates	Trip Spike	Trip blank
Soil					
Heavy metals ¹	16	1	1	0	0
OCs	16	1	1	0	0
OPs	16	1	1	0	0

Notes:

1. Arsenic, lead, cadmium, chromium, copper, nickel, zinc, mercury, beryllium, boron, cobalt.
2. Silver, aluminium, arsenic, cadmium, chromium, copper, iron, manganese, nickel, lead, selenium, zinc, mercury.

Table I.2: Summary of field QA/QC

Parameter	Complies	Comments ¹
Precision		
Standard operating procedures (SOPs) appropriate and complied with	Yes	All sampling was conducted under standard TFA operating procedures.
Field duplicates	Yes	≥ 5%. RPD ² criteria < 30% – 50%.
Inter-laboratory duplicates	Yes	≥ 5%. RPD ² criteria < 30% – 50%.
Accuracy		
Matrix spikes samples appropriate	Yes	≥ 1/media type.
Representativeness		
Sample collection - preservation	Yes	All samples were collected directly into laboratory supplied jars with no headspace. All samples were placed immediately into eskies containing ice.
Sample collection - sample splitting	Yes	Duplicate samples were split in the field by filling each jar collectively (i.e. co-collected). These samples were not submitted for analysis however.
Field equipment calibrated	N/A	No field equipment that required calibration was used.
Decontamination procedures	Yes	Soil samples were collected using a shovel and gloved hand, which was washed with Decon 90 between locations.
Rinsate samples	N/A	No rinsate samples were collected.
Trip blanks	No	≥ 1/field batch (volatiles), < LORs. No volatile compounds were potential contaminants of concern.
Trip spikes	No	≥ 1/field batch (volatiles), 70 - 130%, (recovery) or ≤ 30 - 50% (RPDs). No volatile compounds were potential contaminants of concern.
Comparability		
Consistent sampling staff	Yes	field work was conducted by Tim Fitzroy of TFA
Consistent weather/field conditions	Yes	No extreme weather conditions occurred during or before/after the investigation.
Completeness		
Sample logs and field data	Yes	-
Chain of Custody	Yes	Refer to Appendix F

Notes:

1. For QC samples, specified frequency and acceptance criteria shown.
2. RPD = relative percentage difference.

Table I.3: Summary of laboratory QA/QC

Parameter	Complies	Comments ¹
Precision		
Laboratory duplicates	Yes	≥ 10%, laboratory specified. All laboratory duplicates were within the laboratory specified global acceptance criteria.
Accuracy		
Surrogate spikes	Yes	Organics by GC, 70% - 130%.

Parameter	Complies	Comments ¹
		All surrogates were within the laboratory specified global acceptance criteria.
Matrix spikes analysis appropriate	Yes	≥ 70% - 130%.
Laboratory control samples (LCSs)	Yes	≥ 1/lab batch, 70% - 130%.
Certified reference material (CRM)	N/A	-
Representativeness		
Sample condition	Yes	
Holding times	Yes	
Laboratory blanks	Yes	≥ 1/lab batch, < LORs.
Comparability		
NATA accredited laboratory	Yes	EAL Laboratory Services is a NATA accredited laboratory (accreditation number 14960).
NEPM methods or similar	Yes	LORs were consistent and appropriate.
Completeness		
Sample receipt	Yes	
Laboratory reports	Yes	

Notes:

1. For QC samples, acceptance criteria shown. Acceptance criteria can vary based on analyte, statistical data and laboratory specific methods. Laboratory specified relates to detected concentrations based on LORs, e.g. result < 10 x LOR = no limit, 10 – 20 x LOR = 0 - 50%, > 20 x LOR = 0 - 20%. See laboratory reports for specific details.

Summary and Discussion

The following issues were identified with the data:

- **Precision:** The data shows no significant variability.
- **Accuracy:** The accuracy of the analysis is confirmed by surrogate, matrix spike and LCS recoveries within the acceptance criteria.
- **Representativeness:** No outliers have been reported for QC samples collected to assist in the qualification of representativeness. It should be noted that no trip spikes or blanks were analysed during the works, but no volatile compounds were PCOCs.
- **Comparability:** The data is considered to be acceptable, with consistent sampling staff and NATA accredited laboratory used and all LORs below the relevant criteria.
- **Completeness:** Laboratory and field documentation is considered to be complete.

Data Usability Background

I 1.0 Introduction

Information generated from environmental investigations requires some statement in regard to the usability of the data, and therefore quality assurance (QA) and quality control (QC) are an integral part of the analysis and interpretation of environmental data. QA/QC used in contaminated sites investigations is briefly reviewed in this section.

Quality assurance involves all of the actions, procedures, checks and decisions undertaken to ensure the representativeness and integrity of samples, and accuracy and reliability of analytical results (NEPC 1999). Quality control is the component of QA which monitors and measures the effectiveness of other procedures by the comparison of these measures to previously decided objectives.

There are various components of QA/QC which address the operation of the laboratories and the routine procedures conducted to achieve a minimum level of quality. Examples of QA components include sample control, data transfer, instrument calibration, staff training, etc. Examples of QC components include the measurement of samples to assess the quality of reagents and standards, cleanliness of apparatus, accuracy and precision of methods and instruments, etc. Generally, the management of laboratory QA issues is addressed through accreditation by the National Association of Testing Authorities (NATA), or similar, and monitoring of these issues is not addressed on a project by project basis.

On a project specific basis, those involved in collecting, assessing or reviewing the relevant data should ensure the minimum level of QA is conducted. Appropriate numbers and types of QC samples should be collected and analysed, both field QC samples and laboratory QC samples. While minimum levels of QA/QC are specified in some guidelines, e.g. NSW EPA 1994, AS 4482.1-1997, NEPC 1999, the minimum level required may vary between projects, based on site and project specific aspects. This means that the minimum specified requirements may not be sufficient for a particular project. As described in the NEPM (NEPC 1999):

As a general rule, the level of required QC is that which adequately measures the effects of all possible influences upon sample integrity, accuracy and precision, and is capable of predicting their variation with a high degree of confidence.

I 2.0 PARCC Parameters

Following receipt of laboratory analytical results, data validation is conducted to determine if the specified acceptance criteria have been met. This is conducted to ensure that all data, and subsequent decisions based on that data, are technically sound. Data quality is typically discussed in terms of precision, accuracy, representativeness, comparability and completeness. These are referred to as the PARCC parameters². Field QA/QC and laboratory QC is described below within the PARCC framework.

I 2.1 Precision

I 2.1.1 Duplicates

Precision is a measure of the reproducibility of results under a given set of conditions and is assessed on the basis of agreement between a set of duplicate results obtained from duplicate analyses. The precision of a duplicate determination is measured by comparing the difference between the two samples to the average of the two samples, expressed as a relative percentage difference (RPD).

The determination is:

$$\text{RPD} = (P-D)/(P+D/2) \times 100$$

P = Primary sample

D = Duplicate sample

Three types of duplicates are commonly used:

- Field duplicates are used to measure the precision of the sampling and analytical process
- Inter-laboratory duplicates are used to check on the analytical performance of the primary laboratory
- Laboratory duplicates are used to measure the precision of the analytical process.

I 2.1.2 Field Duplicates

Field duplicates (or blind replicates) are collected from the same location and submitted to the laboratory for analyses, as a primary sample. The sample nomenclature is such that the laboratory is not aware which sample is a duplicate. The RPD is calculated to determine the degree of repeatability (precision) of results obtained from the duplicate analysis. Where results are below the practical quantification limit (PQLs) or limits of reporting (LORs), i.e. non-detects, RPDs cannot be calculated. Where one result is detected, the results are considered to conform when the detected result is less than five times the PQL/LOR.

The PQL/LOR is the lowest concentration of an analyte that can be determined with acceptable precision (repeatability) and accuracy under the test conditions. The PQL/LOR is usually calculated as five times the lower limit of detection (or method detection limit). However, adjustments in PQLs/LORs may be required due to interference from high contaminant concentrations.

As environmental samples can exhibit a high degree of heterogeneity, field duplicates often exceed the acceptance criterion, particularly if the samples are co-collected, for example, because of the potential for losing volatiles during sample splitting. It is generally accepted that before results which fail the acceptance criterion are described as due to low concentrations or sample heterogeneity, the sample should be re-analysed. This may not be necessary when the analytical results are significantly less than the landuse criteria.

2.1.3 Inter-laboratory Duplicates

Inter-laboratory duplicates (or split samples) are field duplicates which are sent to second laboratory and analysed for the same analytes and, as far as possible, by the same methods. These provide a check on the analytical performance of the primary laboratory.

2.1.4 Laboratory Duplicates

Laboratory duplicates (or check samples) are field samples which are split by the laboratory and thereafter treated as separate samples. The RPD is calculated to determine the degree of repeatability (precision) of results obtained from the duplicate analysis.

USEPA (1994) specifies that for inorganics, if the results for laboratory duplicates fall outside of the recommended control limits for a particular analyte, all results for that analyte, in all associated samples of the same matrix, should be qualified as an estimated quantity. For organics, USEPA (1999) does not specify recommended actions for laboratory duplicates.

2.2 Accuracy

Accuracy is a measure of the agreement between an experimental determination and the true value of the parameter being measured. Inasmuch as the true sample concentrations are not known, the determination of accuracy is achieved through the analysis of known reference materials or assessed by the analysis of matrix spikes. Spiking of reference material into the actual sample matrix is the preferred technique because it provides a measure of the matrix effects on the analytical recovery.

Accuracy is measured in terms of percentage recovery as defined by:

$$\%R = ((SSR - SR) / SA) \times 100$$

%R = percentage recovery spike

SSR = spiked sample result

SR = sample result

SA = spike added

2.2.1 Matrix Spikes/Matrix Spike Duplicates

These are samples prepared in the laboratory by dividing a sample into two aliquots and then spiking each with identical concentrations of specific analytes. The matrix spike (MS) and matrix spike duplicate (MSD) are then analysed separately and the results compared to determine the accuracy and precision of the analytes.

2.2.2 Surrogate Spike

Surrogate spikes provide an indication of analytical accuracy. They are used only for analyses which use gas chromatography and are compounds which are similar to the organic analytes of interest in chemical composition, extraction and chromatography, but which are not normally found in field samples. Surrogates are generally spiked into all sample aliquots prior to preparation and analysis. If the surrogate spike recovery does not meet the prescribed acceptance criteria, the samples should be re-analysed.

2.2.3 Laboratory Control Samples

Laboratory control samples (quality control check samples) are laboratory prepared samples of an appropriate clean matrix (i.e. sand or distilled water) which are spiked with known concentrations of specific analytes. The laboratory control sample (LCS) is then analysed and the results are used to assess sample preparation and analytical accuracy, free of matrix effects. Certified reference material (CRM) is another form of LCS, and involves the analysis of a known standard as part of the laboratory batch, e.g. British Columbia sediment samples for analysis of metals.

2.3 Representativeness

2.3.1 Rinsate blanks

Used to determine if sampling equipment has been adequately decontaminated to ensure that cross-contamination between samples has not occurred. The frequency for rinsate blanks is one per piece of equipment per day (AS 4482.1-1997), however it should be noted that cross-contamination will bias samples upwards, and the frequency should therefore be at the investigators discretion.

2.3.2 Trip Blanks

Used only when volatile organics are sampled to determine if transport in motor vehicles or similar has resulted in contamination of the samples. For trip blanks, a sufficient number should be analysed to allow the representativeness of the sampling to be determined. However, it should be noted that cross-contamination will bias samples upwards, and the frequency should therefore be at the investigators discretion.

2.3.3 Trip Spikes

Used only when volatile organics are sampled to attempt to quantify loss of volatiles during the analytical process. For trip spikes, a sufficient number of samples should be analysed to allow qualification of the likely loss of volatiles during the field sampling.

2.3.4 Laboratory Blanks

Laboratory blanks (or method blanks, or analysis blanks) are used to verify that contaminants are not introduced into the samples during sample preparation and analysis. The NEPM (NEPC 1999) specifies that laboratory blanks should be conducted at a frequency of "at least one per process batch". The acceptance criterion for laboratory blanks is non-detect at the PQL/LOR.

2.4 Comparability

Comparability is a qualitative parameter designed to express the confidence with which one data set may be compared with another, including established criteria. Comparability is maintained by using consistent methods and ensuring that PQLs/LORs are below the relevant criteria.

2.5 Completeness

Quality control sample completeness is defined as the number of QC samples which should have been analysed, compared to the actual number analysed. If the appropriate number of QC samples are not analysed with each matrix or sample batch, then the data reviewer should use professional judgement to determine if the associated sample data should be qualified. Completeness also refers to the complete and correct inclusion of field/sample documentation and laboratory documentation.

2.5.1 QC Sample Frequency and Criteria

Based on EPA made or approved guidelines, the following QC samples are required for all contaminated site investigations, unless otherwise specified as part of the data quality objectives (DQOs) process review. All data to be used for validation should conform as a minimum to the requirements specified, regardless of minimum sample size.

Quality Control Sample	Frequency	Results ¹
Precision		
Field duplicates	≥ 5%	≤ 30 - 50% ²
Inter-laboratory duplicates	≥ 5%	≤ 30 - 50% ²
Laboratory duplicates	≥ 10%	Lab specified ³
Accuracy		
Surrogate spikes	Organics by GC	70 - 130% ⁴
Matrix spikes (MSs)	≥ 1/media type	70 - 130% ⁵
Laboratory control samples (LCSs)	≥ 1/lab batch	70 - 130% ⁶
Certified reference material (CRM)	LCS for metals	Lab specified ⁷
Representativeness		
Rinsate samples	≥ 1/field batch	< LOR
Trip blanks	≥ 1/field batch (volatiles)	< LOR
Trip spikes	≥ 1/field batch (volatiles)	70 - 130%, ≤ 30 - 50% ⁸
Laboratory blanks	≥ 1/lab batch	< LOR

Notes

- Where results are laboratory specified, the laboratory analytical reports should be consulted for specific information.
- Relative percentage differences (RPDs) for field duplicates from AS 4482.1 (1997).
- RPDs for laboratory duplicates specified by the laboratory. Based on the magnitude of the results compared to the level of reporting (LOR), e.g. ALS: result < 10 x LOR = no limit, 10 – 20 x LOR = 0-50%, > 20 x LOR = 0-20%. LabMark: < 5 x LOR = 0-100%, 5 – 10 x LOR = 0-75%, > 10 x LOR = 0-50% or 0-30% for metals.
- Surrogate recoveries specified by laboratory based on global acceptance criteria or dynamic recovery limits based on statistical evaluation of actual laboratory data.
- MS recoveries specified by laboratory based on global acceptance criteria.
- LCS recoveries specified by laboratory based on global acceptance criteria or dynamic recovery limits based on statistical evaluation of actual laboratory data.
- CRM recoveries specified by laboratory based on global acceptance criteria.
- Trip spike results are specified as either recoveries or RPDs.

Quality Control Global Acceptance Criteria (GAC)**Accuracy**

LCS - 1 per analytical batch

LCS - general analytes 70% - 130% recovery

Precision

Laboratory duplicate - 1 every 10 samples, minimum one per analytical batch

Laboratory duplicate RPD GAC - 30%, also applicable - No Limit (<10x PQL), 0-50% (10-20x PQL), 0-20% (>20x PQL)

Notes:

This QA/QC report is specific to job number specified above

LCS: Laboratory Control Standard - Reported as percent recovery**RPD:** Relative Percent Difference between two duplicate pieces of analysis**PQL:** Practical Quantification Limit also referred to as Limit of Reporting LOR

.. - denotes no sufficient data available

This report was issued on 29/10/2021.

F Gateway Determination 18/02/24

Gateway Determination

Planning proposal (Department Ref: PP-2021-5766): to permit a dual occupancy (detached) with development consent at Lot 5 DP 585928, 55 Settlement Road, Main Arm.

I, the Acting Director, Northern Region at the Department of Planning, Housing and Infrastructure, as delegate of the Minister for Planning and Public Spaces, have determined under section 3.34(2) of the *Environmental Planning and Assessment Act 1979* (the Act) that an amendment to the Byron Local Environmental Plan 2014 to permit a dual occupancy (detached) with development consent at Lot 5 DP 585928, 55 Settlement Road, Main Arm should proceed subject to the following conditions:

The Council as planning proposal authority is authorised to exercise the functions of the local plan-making authority under section 3.36(2) of the Act subject to the following:

- (a) the planning proposal authority has satisfied all the conditions of the gateway determination;
- (b) the planning proposal is consistent with applicable directions of the Minister under section 9.1 of the Act or the Secretary has agreed that any inconsistencies are justified; and
- (c) there are no outstanding written objections from public authorities.

The LEP should be completed within 9 months of the Gateway determination.

Gateway Conditions

1. Prior to agency and community consultation:

- (a) the planning proposal must be updated to:
 - correct the reference to zone R2 on page 3;
 - include additional discussion of Aboriginal cultural heritage, including a recent AHIMS search;
 - reflect the required upgrades to the driveway access, internal driveway and Settlement Road outlined in the submitted Traffic Safety Assessment and Bushfire Assessment;
 - include additional information regarding flooding, such as a map that illustrates inundation of the site and further details regarding access (including the type of flood event that will affect the access as well as the duration that the road is inaccessible); and
 - address the outcomes and recommendations of the updated reports required by conditions 1(b) and 1(c).
- (b) the following reports must be updated to include an assessment of both dwellings on the land:
 - Preliminary Site Contamination Report
 - On-Site Wastewater Management System Review
 - Traffic Safety Assessment
 - Land Use Conflict Risk Assessment

- Ecological Assessment
 - Bush Fire Assessment Report
- (c) the Ecological Assessment must be amended to address the required upgrades to the driveway access, internal driveway and Settlement Road outlined in the submitted Traffic Safety Assessment and Bushfire Assessment.
2. Public exhibition is required under section 3.34(2)(c) and clause 4 of Schedule 1 to the Act as follows:
- (a) the planning proposal is categorised as standard as described in the *Local Environmental Plan Making Guideline* (Department of Planning, Housing and Infrastructure , August 2023) and must be made publicly available for a minimum of 20 working days; and
- (b) the planning proposal authority must comply with the notice requirements for public exhibition of planning proposals and the specifications for material that must be made publicly available along with planning proposals as identified in *Local Environmental Plan Making Guideline* (Department of Planning, Housing and Infrastructure , August 2023).
3. Consultation is required with the following public authorities and government agencies under section 3.34(2)(d) of the Act and/or to comply with the requirements of applicable directions of the Minister under section 9 of the Act:
- NSW Rural Fire Service
 - NSW State Emergency Service
 - Tweed Byron Local Aboriginal Land Council
 - Arakwal Corporation
- Each public authority is to be provided with a copy of the planning proposal and any relevant supporting material via the NSW Planning Portal, where possible, and given at least 30 working days to comment on the proposal.
4. A public hearing is not required to be held into the matter by any person or body under section 3.34(2)(e) of the Act. This does not discharge Council from any obligation it may otherwise have to conduct a public hearing (for example, in response to a submission or if reclassifying land).

Dated 18 January 2024

Lucy Walker
A/Director, Northern Region
Local and Regional Planning
Department of Planning, Housing and
Infrastructure

**Delegate of the Minister for Planning and
Public Spaces**
